# 1. Introduction

Welcome to the Installation and Configuration Manual of Kernel for Exchange Server. The Manual explains the step-by-step procedure to operate the tool. Kernel for Exchange Server is a complete solution to keep your Exchange Server up and running in good state. It allows recovering data from corrupted EDB files and backup file, and then allows to migrate them to live ExchangeServer, Office365 or to Outlook PST files. It can also export email files to MSG and EML file formats.

This manual is helpful on how to install, configure and operate Kernel for Exchange Server.

However, if the user finds any problem at any point of the working process, then he can freely contact our Support Team. The contact details for the support are mentioned in a separate 'Support' section, listed at the end of this document.

## 2. Requirements and Prerequisites

Before you install Kernel for Exchange Server, make sure that your machine fulfills the following prerequisites:

### 2.1 Basic System Requirements

- Processor
  - Minimum dual-core processor
  - Recommended quad-core processor

Recover or Migrate from any of these Sources

- Offline EDB
- Live Exchange
- Outlook Profile
- Office 365
- Public Folder

Save or Migrate to any of these Destinations

- PST File
- Live Exchange
- Outlook Profile
- Office 365
- Public Folder

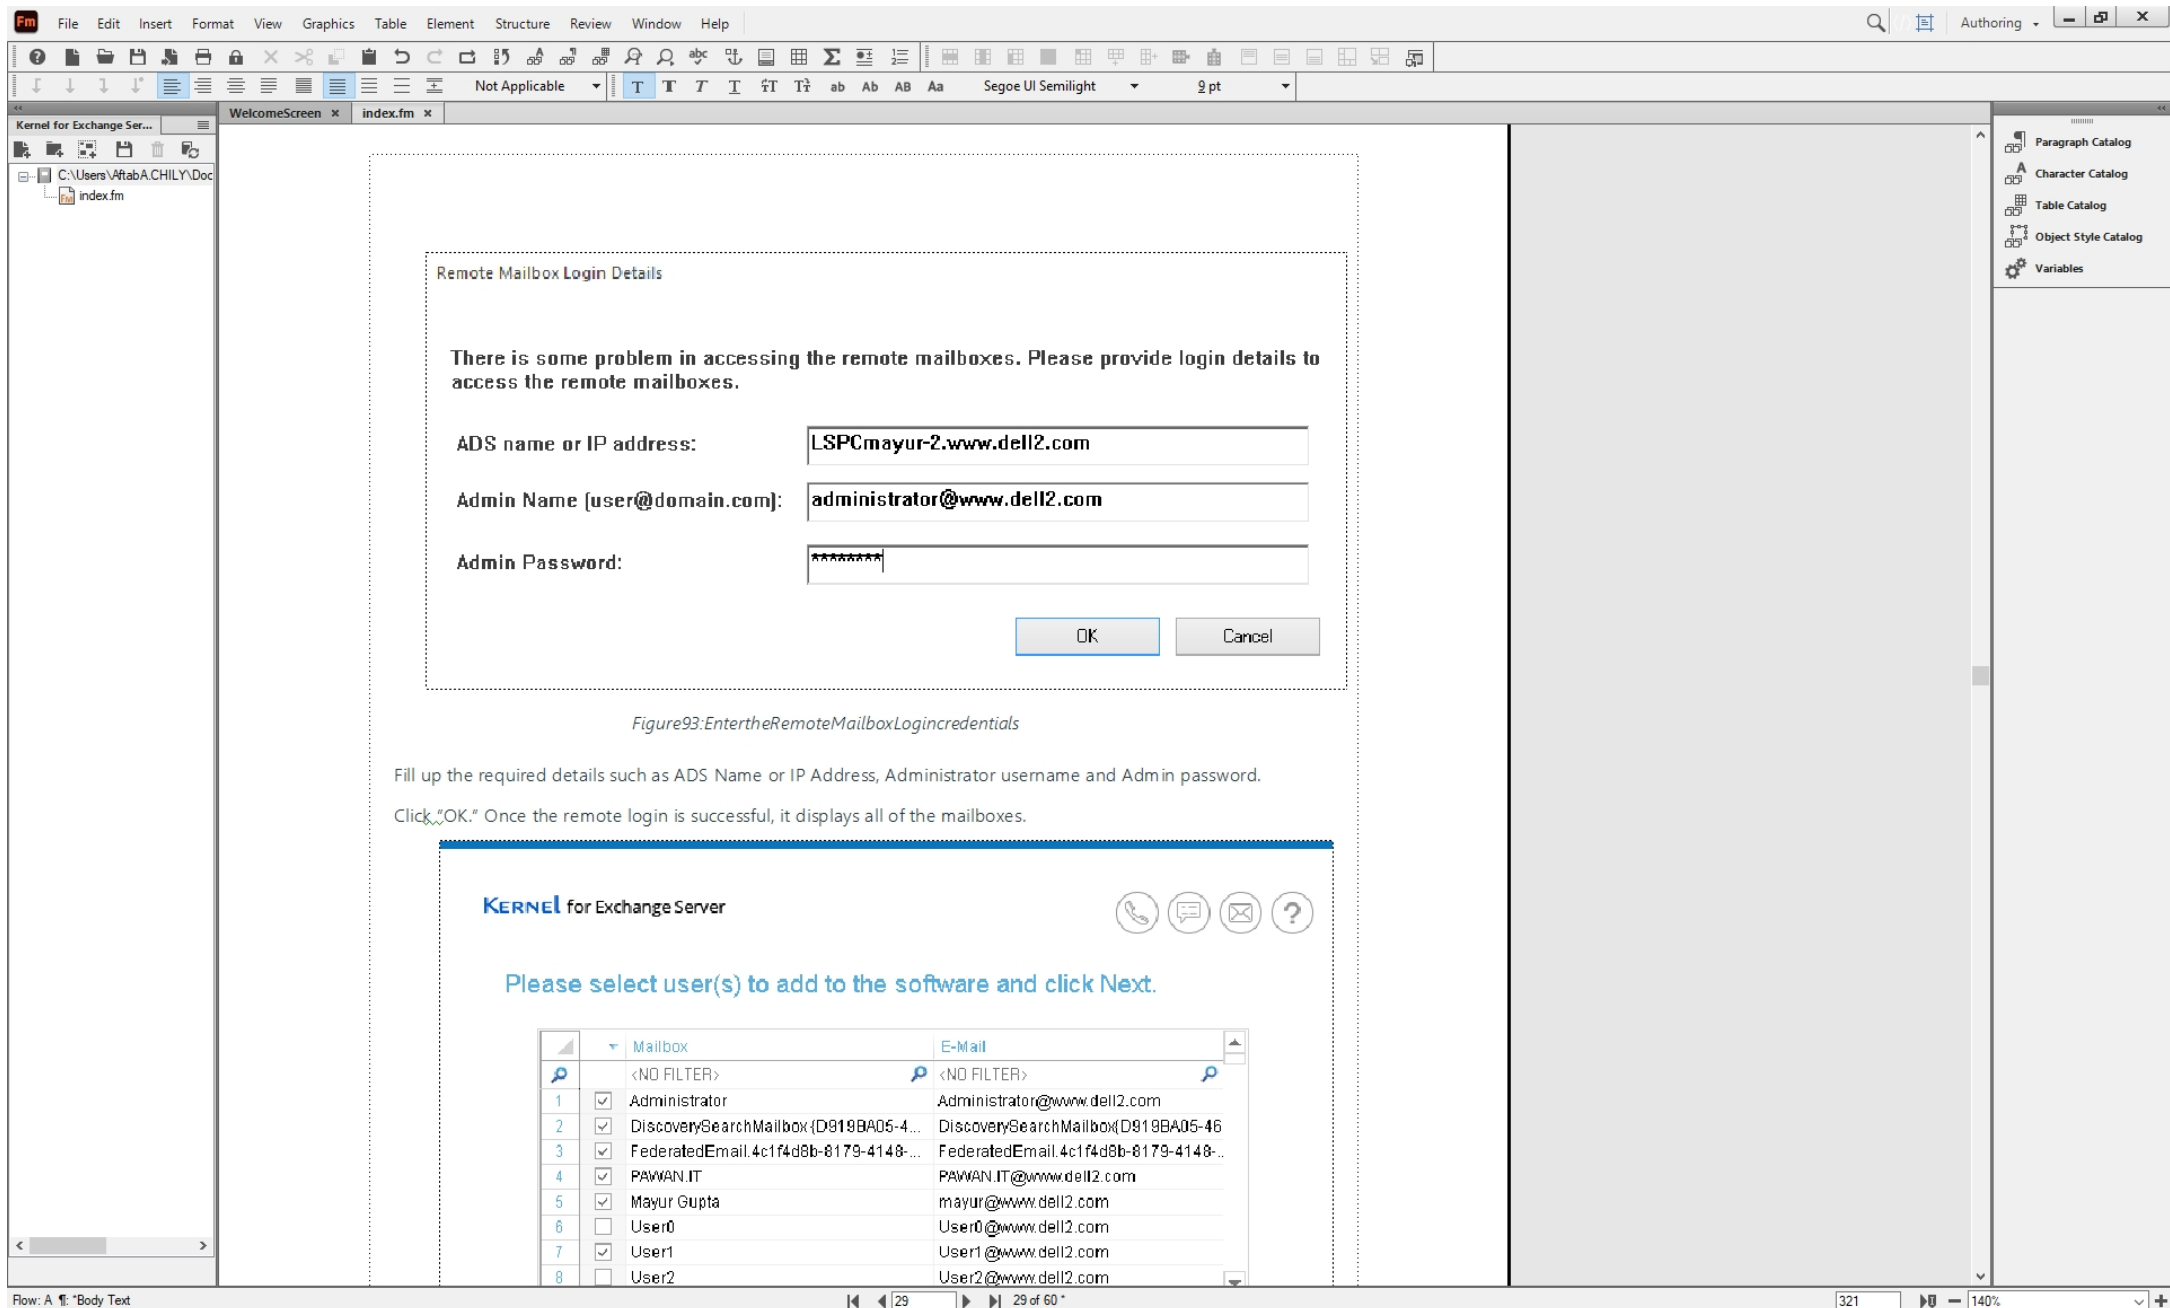

Visit: [www.nadpuinterhasse.com/Exchange-Server-Data-Recovery/](http://www.nadpuinterhasse.com/Exchange-Server-Data-Recovery/)

You are using Technician edition (Ver. 21.2)

## 5.Add Sources

The following can be added as a source in Kernel for Exchange Server.

1. Off line EDB file
2. Live Exchange
  - a. Single Mailbox
  - b. Public Folders

Check the mailboxes that you want to connect, and click "Next." The program adds the check marked mailboxes as the Source.

## 4.3. Configure Outlook profile to Add Exchange 2013 / 2016 Mailbox as Source

The program allows to configure settings to establish a connection with Exchange Server. Though, this feature is available only when you connect Exchange Server 2013 and Exchange 2016.

Use the following steps to configure Outlook profile and connect with Exchange 2013/2016 mailboxes as the sources only when the automatic process fails.

1. Connect multiple mailboxes as source and select "Its Exchange Server 2013/2016" option to manually configure Outlook profile. while adding the Live Exchange as Source and then select "Manually Configure Outlook Profile".

8. Click "Add" to add more PST files.
9. Click "Remove" to remove the selected PST file(s) from the list.
10. Click "Next" to proceed.
11. Click "Finish" to add the PST file as destination.

## 11.3.Create New PST File using a Template

By default, Kernel for Exchange Server uses the default template of PST file prescribed by the installed Microsoft Outlook to create the PST files that can be used as destination. However, you can also use a PST file of any language, Unicode/non-Unicode, customized folder, etc. to be used as a template for generating PST files that can be used as the destination. Let us have a look how you can create a custom PST in the Outlook, use it in the software as template, and generate PST file using that template.

Use the following steps to create new PST file using a template

1. On "Tools" menu, click "Settings" to manage the software settings.
